

The Little Work Horse

Don't let the smaller size fool you, just like the larger tandem axle Premier series trailers, the single axle provides you with the same high quality tubular steel frame and crossmembers for increased strength and durability. Axles, slipper spring suspensions, wheels and radial tires are selected specifically for each model. The smaller size makes them perfect for day-to-day activities like hauling your golf cart to and from the course, or transporting your skidsteer to the jobsite. The tilting deck allows for smooth transition from the ground to the deck for those hard to load items.

Slide In Ramps

Convenient and easy to use for all loading and unloading situations. Ramps are tucked away neatly up and under the deck when not in use.

Premier Series

REDEFINING QUALITY

Premier Series

Models: L135, L135T, L270T, L270DT

When you require the best, the Premier series trailer will be your choice. The Trailtech Premier series trailers are manufactured using the latest in trailer technology and design. The HSS tubing main frame and crossmembers are carefully matched to the GVWR of each trailer, ensuring proper weight to strength ratio required for maximum performance. Axles, slipper spring or rubber ride suspensions, wheels and radial tires are also selected specifically for each model. Reflective taping, safety breakaway kits, safety chains, rated couplers, rubber mounted and recessed lighting and protected wiring all ensure that each Premier series trailer model will provide years of trouble-free use and maximum safety for you.

With a wide variety of standard features on each of the Premier series trailer models, you will be able to select a trailer that will meet your needs. The design of the Premier series trailers make for easy loading with the low deck height, and many ramping options are available, including a tilting deck. The treated wood decking provides for long life and the ability to handle the most extreme working conditions.

LED lighting is rubber mounted and recessed to increase life and response time. All electrical wiring is protected and connections are sealed for maximum protection and trouble-free use. Sealed junction boxes are used in key areas for critical wiring connections.

1
Dovetail & Ramps
The unique pivot dovetail flip up ramps allow even hard to load equipment to be loaded and unloaded with ease. The ramps are adjustable side to side, ensuring that a variety of equipment can be accommodated.

2
Expanded Metal In Hitch
All tandem axle Premier trailers feature expanded metal in the hitch area for your convenience. Adding locking tool box lids, spare tire carrier or locking chain rack is easy with the exclusive Trailtech bolt-on option A-frame hitch area.

3
Adjustable Ball Coupler/Pintle
Hooking up the Premier trailer is now easier than ever with the adjustable ball coupler/pintle. This feature allows you to raise or lower the height of the coupler to match your vehicle's hitch height. Just another example of Trailtech ingenuity.

4
Tilt Deck
The tilt deck measures 82.5" between fenders, allowing for those wider loads. Simply drive your unit up onto the deck, and when you are over center the deck will start to go into transport mode on its own.

5
Fender Guard
Trailtech has now incorporated heavy duty fender guards into its tilting deck trailer. The fender guard protects against the unexpected and will keep your fenders looking good as new for years to come. This is all done without sacrificing payload space.
